Summary

Product engineer with 8 years of full-stack experience turning founder ideas into shipped, revenue-generating software. Recent work spans AI workflows, mobile, and full-stack web—including an AI-assisted language learning product taken from concept to paid web and mobile app launch.

Product Impact & Technical Skills

- **Launch ownership:** Took Palabrundo from nontechnical-founder concept to paid iOS/Android/web product, shaping MVP scope, teacher workflows, billing, store readiness, and release operations.
- **AI product systems:** Built Genrupt workflows for market/review intelligence, listing generation, MCP/agent access, async jobs, and retry-safe credit billing.
- **Prior product impact:** Shipped scheduling UX for 3,000+ sports organizers, including a drag-and-drop grid that reduced scheduling time by 45%.
- **Core stack:** ChatGPT Codex | Claude Code | TypeScript | React | Next.js | TanStack Start | React Native/Expo | Node.js | PostgreSQL/Supabase | Stripe/RevenueCat | OpenAI/Claude | MCP | Evals | RAG | Vercel | Sentry

Work Experience

Product Engineer, Full Stack + AI	Independent	Sep 2024 – Current
Palabrundo Spanish Reading App		
● Built and launched a bilingual Spanish reading product across Expo iOS/Android, a live TanStack Start web app, and a Supabase-backed API/data layer. ● Created the teacher commercial path: AI text generation and import, student roster and invite flows, share links, PDF export, notifications, and admin/safety review tools. ● Delivered end-to-end launch operations: RevenueCat/Stripe billing, Vercel hosting, Sentry observability, release runbooks, and live App Store/Google Play submissions.		
Amazon Creative Ops Platform for Sellers		
● Partnered with Genrupt's founder to shape and build the pivot from AI media generation into an Amazon seller creative-ops platform, turning product input into shipped workflows for market research, review intelligence, listing generation, and A+ content. ● Built Genrupt's remote MCP and Agent Access surface, enabling paid users to connect external agents and run market analysis, review scraping, listing-image generation, and A+ content workflows through a permissioned tool catalog. ● Turned Genrupt's AI workflows into reliable async jobs with pg-boss, idempotent operation tracking, progress/status APIs, retry-safe credit billing, and durable links to generated assets and research outputs.		
Senior Front End Engineer	Nearsure	Feb 2023 – Feb 2024
● Shipped scheduling and mobile UX improvements for a sports platform serving 3,000+ organizers.		
Front End Engineer	LeagueApps	Nov 2021 – Feb 2023
● Reduced scheduling time by 45% and enhanced UX by implementing an intuitive drag-and-drop scheduling grid.		

- Built comprehensive reporting modules with AG Grid, focusing on clear data presentation for event planning and analysis.
- Eliminated team double-booking issues by engineering an automated conflict detection system with clear user notifications.
- Established a standardized front-end component library using Styled Components and Storybook, ensuring consistent user experience across the application.

Selected Projects

- **BA Eventos** - AI event discovery for Buenos Aires—3,200+ events scraped from 5 sources, surfaced through a Claude agent with 17 tools (search, save, directions, sharing). Built semantic search with OpenAI embeddings + pgvector and a bilingual enrichment pipeline.
- **Apartment Finder** - Built an AI apartment-search tool that classifies in-unit vs. shared laundry across Buenos Aires listings using browser extraction, OpenAI vision, and structured evals.

Education

- **B.S. in Health Sciences**, University of South Florida
