Summary

Product-minded Full-Stack + AI Engineer with 8 years of experience building and launching web, mobile, and AI products with founders. Recently shipped an AI/agent-powered Amazon seller workflow platform and built a Spanish reading app (iOS, Android + web) from concept to production with subscriptions and LLM features.

Technical Skills

AI & Agents

OpenAI / Anthropic APIs • MCP • Evals • RAG • Agent Workflows • Embeddings

Frontend & Mobile

TypeScript • JavaScript • React • Next.js • TanStack Start • React Native / Expo

Backend & Data

Node.js • Rails • PostgreSQL • Supabase • pgvector • Stripe • RevenueCat

Infrastructure & Tooling

ChatGPT Codex • Claude Code • Cursor • Vercel • Cloudflare • Docker • Browserbase • Playwright

Work Experience

Founder & Product Engineer	HC Studio LLC	Sep 2024 – Current
- Delivered product engineering and web development services for multiple client engagements, including full end-to-end development of web and mobile applications. - Built and launched Palabruno—a complete Spanish reading platform across iOS, Android, and web—for a non-technical founder, delivering teacher classroom tools, AI-assisted reading/creation features, RevenueCat subscriptions, Stripe billing, and successful app store releases. - Transformed an AI media MVP into a full production platform for Amazon sellers, enabling the first 100 paying customers. Added agent-accessible workflows, MCP OAuth, background job processing, subscriptions, credit accounting, and admin controls. - Owned the full product lifecycle across client projects—from architecture and AI integration through monetization, launch, and ongoing development—while delivering both custom web applications and complete mobile + web products.		
Senior Front End Engineer	LeagueApps, later Nearsure Contractor	Nov 2021 – Feb 2024
- Joined LeagueApps full-time, then continued on the same product through Nearsure, shipping scheduling and reporting UX for a youth sports platform powering 3,000+ organizations and reaching 10M+ players, parents, and coaches. The platform processed billions of dollars in cumulative transactions and managed millions of events. - Contributed during a period of strong post-COVID recovery—the company earned Inc. 5000 recognition in 2022 after rebounding from a 95% revenue drop in 2020.		

- Cut scheduling time by 45% by building drag-and-drop calendar workflows, conflict detection, and double-booking prevention for multi-team seasons and tournaments.
- Identified frequent double-booking issues in complex multi-team scheduling; implemented proactive conflict detection and in-app notifications that prevented conflicts before they occurred and improved operational reliability for organizers.
- Enabled data-driven decision-making for organizers by building flexible reporting screens with AG Grid, allowing analysis of event and planning data without friction.
- Improved long-term product scalability and consistency by standardizing the frontend with reusable Styled Components, documented in Storybook—supporting engineering team growth (from ~70 to ~150 employees during tenure) and cross-team collaboration.

Software Engineer

Capgemini

Jan 2019 – Oct 2021

- Delivered software solutions across multiple client engagements at a global consulting firm, including a 16-month project with Disney Cruise Line and shorter engagements with Cisco and GE Aviation.
- Led end-to-end delivery of a critical reporting module for Disney Cruise Line's ship and crew management system while building additional UI screens that streamlined daily operational workflows for ship staff and management.
- Designed and built executive KPI dashboards for Cisco that provided real-time visibility into system and operational performance.
- Optimized automated test suite execution time by 60%, significantly improving release velocity and reducing maintenance overhead.
- Maintained and enhanced five Java Spring Boot microservices for GE Aviation, rapidly ramping up on complex aviation domains and driving reliable collaboration with offshore teams to support evolving operational needs.

Front End Engineer

8base

Nov 2017 – Nov 2018

- Built a comprehensive end-to-end automated testing suite for a web application, significantly improving overall software quality and reducing manual QA effort.
- Developed a custom CI script that integrated Jira and GitLab, enabling automatic transition of open tickets and ensuring QA always had an accurate, up-to-date list of items to test.
- Delivered production-ready frontend features using Node.js and React while implementing robust automated testing and deployment pipelines that improved code quality and release reliability.

Independent Projects

- **Casamo (casamo.app)** - AI tool that helps remote workers find suitable 2–8 week furnished stays on Airbnb and Booking.com. Scans up to 100 listings per destination, analyzes photos/reviews/amenities for workspace, kitchen, and livability, then delivers a curated shortlist with evidence and targeted questions to ask the host. Private beta. Rails, OpenAI, Browserbase, Stripe.
- **BA Eventos (baeventos.com)** - Bilingual AI event concierge for Buenos Aires that scrapes and enriches multiple sources daily to power semantic search, saving, directions, and sharing. Has processed 36,000 events. Live. Trigger.dev, Claude agent, Playwright, OpenAI embeddings + pgvector.

Education

- **B.S. in Health Sciences**, University of South Florida
