Summary

Software engineer with eight years of experience across client consulting, SaaS, and enterprise software. Works directly with clients and founders to understand requirements, define scope, and deliver applications. Experience includes operational discovery and prototyping, production AI workflows, existing-product stabilization, and launch and handoff. Strong in TypeScript, full-stack development, integrations, and reliable AI processing.

Work Experience

Founder & Software Engineer **HC Studio** **Mar 2024 – Present**

Deliver software directly for clients and founders, with engagements spanning discovery, scoping, implementation, production support, and handoff.

Desarmadero La Torre — Client software and operations prototype

- Built a searchable automotive-parts catalog; the client subsequently returned for a broader operations engagement.
- Translated discovery into a functional specification and role-based prototype covering sales, payment release, dismantling assignments, and vehicle lookup.

Genrupt — Contract AI Product Engineer

- Worked directly with the founder to deliver seller workflows for AI content generation, editing, and listing preparation.
- Built organization-aware access, billing and credit controls, and recoverable background processing; used atomic reservations and idempotent settlement to handle concurrent requests and retries.
- Exposed selected seller workflows through authenticated MCP tools with asynchronous results.

Palabruno — Contract AI Product Engineer

- Collaborated with the founder on scope and learner/teacher workflows; delivered web and mobile applications with subscriptions and payment integrations.
- Built validated AI reading workflows with regression checks and targeted repair; prepared launch assets, release documentation, and handoff notes.

Mucho Hangouts — Fractional CTO

- Addressed messaging, notification, authentication, and application-state failures inside an existing product while feature delivery continued.
- Provided technical direction for a five-person team and mentored two junior developers through reviews, pairing, and reusable patterns.

Additional consulting

- Casa Elaria: Built a focused storefront that captured email interest at checkout without taking payment, enabling a purchase-intent test before inventory investment.
- JIEC Labs: Reviewed the shopping journey and delivered seven prioritized recommendations covering product discovery, product-page clarity, and mobile performance.

Senior Frontend Engineer **LeagueApps, later via Nearsure** **Nov 2021 – Feb 2024**

- Modernized tournament scheduling with React on the company's first migration team, helping establish shared frontend patterns and components.
- Built drag-and-drop scheduling, conflict detection, and double-booking prevention for tournament organizers.
- Built self-service reporting with AG Grid, using virtualization and memoization for tables with tens of thousands of rows.

Software Engineer **Capgemini** **Jan 2019 – Oct 2021**

- Built reporting and KPI dashboards for Disney Cruise Line and Cisco; maintained Java Spring Boot microservices for GE Aviation.

Frontend Engineer **8base** **Nov 2017 – Nov 2018**

- Built Jira / GitLab CI/CD automation and refactored 20+ shared UI components into a reusable library.

Technical Skills

Languages & backend: TypeScript, Python, Node.js, FastAPI, PostgreSQL, Supabase

AI & integrations: Anthropic and OpenAI APIs, RAG, structured outputs, tool calling / MCP, evaluations, OAuth, Stripe

Frontend & delivery: React, Next.js, SvelteKit, React Native / Expo, Cloudflare Workers / Workflows, AWS, Docker, GitHub Actions, Playwright

Languages

- **English** — Native
- **Spanish** — Professional working proficiency

Education

- **B.S. in Health Sciences**, University of South Florida
