Summary

Senior Frontend Engineer with eight years of experience building React and TypeScript products. Experience spans independent product ownership, web and mobile launches with founders, and mentoring junior developers.

Technical Skills

Languages: TypeScript, JavaScript, HTML, CSS

Frontend: React, Next.js, SvelteKit, React Native / Expo

Backend & State: Node.js, TanStack Query, Redux, Context API, Zod

Testing & Tooling: Playwright, Vitest, Storybook, GitHub Actions, GitLab CI/CD

Work Experience

Founder & AI Product Engineer **HC Studio** **Mar 2024 – Present**

- Built and operated independent AI products and delivered client products with founders, covering product design, software engineering and operations.
- Partnered directly with founders to launch Palabruno on web, iOS and Android and help Genrupt serve its first 200 paying customers.
- Modernized product frontends through SvelteKit and TanStack Start migrations, clearer server/client boundaries and explicit React types while preserving existing workflows.

Casamo — AI Product Engineer

- Built a SvelteKit AI rental-research product that lets users compare listings on a map or side by side, with source-linked findings and saved selections.
- Built multi-provider rental search with shareable, persistent search URLs, preserving results from available providers when one fails.

BA Eventos — AI Product Engineer

- Built a streaming SvelteKit event-discovery chat with saved conversations, retry handling, and navigation that preserves the conversation and scroll position when viewing event details.
- Built conversational event search across a six-source catalog, combining semantic and keyword retrieval with venue and date filters.

Palabruno — AI Product Engineer

- Built web and mobile reading interfaces with phrase selection, connected text highlights and vocabulary notes tailored to the passage.

Genrupt — AI Product Engineer

- Built a Next.js and TypeScript AI image editor with editable text layers, background inpainting, batch editing, undoable changes and image exports.
- Built recoverable AI generation workflows with atomic PostgreSQL credit reservations and row locking, reusing existing provider jobs and preventing duplicate credit settlement.

Mucho Hangouts — Fractional CTO

- Served as Fractional CTO on a five-person team, mentoring two junior developers through code reviews, pair programming and reusable frontend patterns.
- Stabilized React messaging and notifications by centralizing authentication and query state and correcting socket connection lifecycles.

Senior Frontend Engineer **LeagueApps, later via Nearsure** **Nov 2021 – Feb 2024**

- Helped establish shared React patterns and components on LeagueApps' first frontend migration team, modernizing tournament scheduling.
- Built drag-and-drop scheduling, conflict detection, and double-booking prevention, reducing organizer scheduling time by 45%.
- Built self-service reporting with AG Grid; used virtualization and memoization for tens of thousands of rows, reducing load and interaction lag by 70%.

Software Engineer **Capgemini** **Jan 2019 – Oct 2021**

- Delivered a reporting module for Disney Cruise Line's ship and crew management system.
- Built executive KPI dashboards for Cisco.
- Maintained five Java Spring Boot microservices for GE Aviation, collaborating across offshore teams.

Frontend Engineer **8base** **Nov 2017 – Nov 2018**

- Refactored 20+ shared UI components into a reusable library, reducing duplicate code by 30%; built Jira / GitLab CI/CD automation.

Languages

- **English** — Native
- **Spanish** — Professional working proficiency

Education

- **B.S. in Health Sciences,** University of South Florida
