Summary

Product-minded full-stack engineer with 8 years of experience scoping, building, and launching web, mobile, and AI products close to founders and users. Recently helped pivot an Amazon seller platform into AI/agent workflows and took a nontechnical founder’s Spanish reading app from concept to live web and mobile apps with subscriptions.

Product Impact & Technical Skills

- **AI/ML:** OpenAI/Anthropic API | MCP | Evals | RAG | Agent Workflows | Embeddings
- **Stack:** TypeScript | React | Next.js | TanStack Start | React Native/Expo | Node.js | PostgreSQL/Supabase | pgvector | Stripe | RevenueCat
- **Tooling:** ChatGPT Codex | Claude Code | Vercel | Sentry | Cloudflare | Docker | Browserbase/Playwright

Work Experience

Founder & Product Engineer	HC Studio LLC	Sep 2024 – Current
Palabrundo Spanish Reading App		
● Took a nontechnical founder’s idea to a launch-ready iOS, Android, and web product with teacher workflows, mobile reading, billing, and store release support. ● Built teacher and classroom workflows end to end: rosters, groups, invites, share history, assignment notifications, and teacher web payments. ● Built AI-assisted reading and creation loops across mobile and web: imported/generated texts, tap-to-read word help, pronunciation, reporting, and PDF export. ● Shipped monetization and launch trust layers with RevenueCat subscriptions, Stripe checkout/webhooks, moderation, release docs, and App Store/Google Play listings.		
Amazon Creative Ops Platform for Sellers		
● Helped turn Genrupt from an AI media MVP into an agent-accessible Amazon seller workflow platform for research, listings, A+ content, reviews, variations, and video. ● Built Claude-compatible MCP OAuth flows with audit logging, revocation, and CLI/skill packaging for agent access. ● Moved generation workflows onto pg-boss so long-running jobs could run in parallel with status, result, and progress tracking. ● Shipped commercial foundations across subscriptions, credit accounting, webhook reconciliation, metered team tiers, seat caps, affiliate payouts, and admin finance controls.		
Senior Front End Engineer	LeagueApps/Nearsure (contract)	Nov 2021 – Feb 2024
● Joined LeagueApps as a full-time front-end engineer, then continued on the same product as a Nearsure contractor, shipping web and mobile UX used by 3,000+ sports organizers.		

- Cut scheduling time by 45% by building a drag-and-drop scheduling grid for organizers managing multi-team seasons.
- Prevented team double-bookings with automated conflict detection and clear in-product notifications.
- Built reporting screens with AG Grid so organizers could analyze event and planning data without fighting the interface.
- Standardized the front end with reusable Styled Components documented in Storybook, keeping the product more consistent across teams.

Software Developer

Capgemini

Jan 2019 – Oct 2021

- Led the development and delivery of a critical reporting module, collaborating closely with business analysts and UI/UX teams in an agile environment.
- Designed and implemented executive dashboards to visualize key networking system KPIs, enabling data-driven decision-making at the leadership level.
- Optimized application test suite, achieving a 60% reduction in execution time and saving approximately 20 minutes per development cycle, significantly improving team productivity.
- Facilitated knowledge transfer and problem-solving by leading technical meetings with offshore developers, resulting in improved code quality and faster issue resolution.

Independent Projects

- **Casamo** - Vets long-stay Airbnb/Booking.com listings by extracting evidence from photos and reviews, then turning missing-data gaps into specific questions to ask the host. Private beta at casamo.app. *Stack: Rails app with multi-stage scan pipeline with per-provider retries, OpenAI evidence extraction, Browserbase scraping, Stripe-paid passes.*
- **BA Eventos** - Bilingual event-discovery concierge for Buenos Aires, surfaced through a 15-tool Claude agent (search, save, directions, share). Daily pipeline scrapes and enriches 4 sources for semantic search. Live at baeventos.com. *Stack: Trigger.dev orchestration, Jina + Claude Haiku (HTML) and headless Playwright (JS-heavy) enrichment, OpenAI embeddings + pgvector with structured filters.*

Education

- **B.S. in Health Sciences**, University of South Florida
