Summary

Senior Frontend Engineer with eight years of software engineering experience building complex web products. Strong in React, TypeScript, reusable UI components, data-heavy interfaces, and frontend performance. Delivered scheduling and reporting tools at LeagueApps and shipped client products across web, iOS, and Android.

Technical Skills

Frontend & Mobile: TypeScript, React, Next.js, SvelteKit, React Native / Expo, TanStack Start

UI Architecture & Performance: Shared component libraries, AG Grid, virtualization, memoization

Testing & Tooling: Playwright, Vitest, Storybook, GitLab CI/CD

Backend & Integrations: Node.js, Python, PostgreSQL, Supabase, Stripe, RevenueCat

Cloud & AI: Cloudflare Workers / Workflows, AWS, OCR / inpainting, tool calling / MCP

Work Experience

Founder & AI Product Engineer

HC Studio

Mar 2024 – Present

Deliver client web and mobile products from requirements and UX through implementation, integrations, and launch.

Palabrundo — Full-stack engineering

- Took a Spanish-reading prototype to launch on iOS, Android, and web using TypeScript, React Native / Expo, and TanStack Start.
- Built learner reading and tutor-management workflows with contextual word and phrase support; integrated RevenueCat and Stripe subscriptions and prepared release handoff.

Genrupt — Product engineering

- Built a Next.js / TypeScript image editor that turns OCR-detected text into editable layers and uses inpainting to remove the original text.
- Helped Genrupt serve its first 200 paying customers with billing, credit controls, recoverable generation jobs, and organization-aware MCP workflows.

Mucho Hangouts — Fractional CTO

- Stabilized React messaging and notification flows across authentication and app-state changes in a live social-events product.
- Guided two junior developers in a five-person product team through code review, pairing, and reusable frontend patterns.

Senior Frontend Engineer

LeagueApps, later via Nearsure

Nov 2021 – Feb 2024

- Helped establish shared React patterns and components on LeagueApps' first frontend migration team, modernizing tournament scheduling.
- Built drag-and-drop scheduling, conflict detection, and double-booking prevention, reducing organizer scheduling time by 45%.
- Built self-service reporting with AG Grid; used virtualization and memoization for tens of thousands of rows, reducing load and interaction lag by 70%.

Software Engineer

Capgemini

Jan 2019 – Oct 2021

- Delivered a reporting module for Disney Cruise Line's ship and crew management system and executive KPI dashboards for Cisco.
- Maintained five Java Spring Boot microservices for GE Aviation, collaborating across offshore teams.
- Reduced automated test-suite runtime by 60%.

Frontend Engineer

8base

Nov 2017 – Nov 2018

- Refactored 20+ shared UI components into a reusable library, reducing duplicate code by 30%; built Jira / GitLab CI/CD automation.

Selected Projects

Casamo — Independent product | casamo.app

- Designed and built a TypeScript / SvelteKit stay-research product with evidence-backed shortlists and dedicated list, map, and side-by-side comparison views.
- Iterated from tester feedback: surfaced smaller qualifying reports, made comparison a first-class view, and clarified background-search progress and completion.

BA Eventos — Independent product | baeventos.com

- Built a TypeScript / SvelteKit discovery interface with plain-language search, one-tap event shortcuts, and voice dictation over a structured local event catalog.

Languages

- **English** — Native
- **Spanish** — Professional working proficiency

Education

- **B.S. in Health Sciences**, University of South Florida
