Summary

AI Engineer with eight years of software engineering experience, delivering AI products and backend systems from business requirements to launch. Recent client work spans AI image editing, language-learning pipelines, billing, and recoverable background processing. Helped Genrupt support its first 200 paying customers and took Palabrundo from an early prototype to launch across iOS, Android, and web.

Technical Skills

Backend & Data: TypeScript, Node.js, Python, FastAPI, Pydantic, PostgreSQL, SQL, Cloudflare D1, DynamoDB

Applied AI: RAG / hybrid retrieval, NLP, OCR / inpainting, structured outputs, tool calling / MCP, LangGraph, evaluations / LangSmith

Frontend & Mobile: React, Next.js, SvelteKit, React Native / Expo, TanStack Start

Infrastructure & Payments: Cloudflare Workers / Workflows / Containers, Docker, Stripe, RevenueCat

AWS: Lambda, DynamoDB, SQS, Step Functions, CloudFormation, IAM, CloudWatch, CloudFront

Work Experience

Founder & AI Product Engineer	HC Studio	Mar 2024 – Present
Deliver client AI products from requirements through backend engineering, integrations, UX, and launch.		
Genrupt — Contract product engineering		
- Built an AI image editor that turns detected text into editable layers using OCR and inpainting; evaluated self-hosted models on RunPod and selected providers for latency and removal quality. - Prevented concurrent AI generation from overdrawing account balances through atomic PostgreSQL credit reservations, row locking, and failure cleanup. - Moved image generation to pg-boss jobs; made video retries reuse provider jobs and settle costs idempotently. - Exposed market-analysis and Amazon listing workflows through MCP, with OAuth, organization-aware access, and asynchronous results.		
Palabrundo — Contract full-stack engineering		
- Shipped iOS, Android, and web apps with Supabase, RevenueCat subscriptions, and Stripe billing; owned AI reader development and release handoff. - Engineered a Spanish reader compiler combining NLP, linguistic rules, and constrained LLM generation to produce tappable words, phrases, and contextual learning cards, with targeted repair and regression evaluations. - Implemented durable text-processing workflows with persisted progress, failure recovery, and per-stage latency and model-cost tracking.		

Senior Frontend Engineer

LeagueApps, later via Nearsure

Nov 2021 – Feb 2024

- Built drag-and-drop scheduling, conflict detection, and double-booking prevention, reducing organizer scheduling time by 45%.
- Built self-service reporting with AG Grid; used virtualization and memoization for tens of thousands of rows, reducing load and interaction lag by 70%.

Software Engineer

Capgemini

Jan 2019 – Oct 2021

- Maintained five Java Spring Boot microservices for GE Aviation, collaborating across offshore teams.
- Delivered a reporting module for Disney Cruise Line's ship and crew management system and executive KPI dashboards for Cisco.
- Cut automated test-suite runtime by 60%.

Frontend Engineer

8base

Nov 2017 – Nov 2018

- Built Jira / GitLab CI/CD automation and refactored 20+ shared UI components into a reusable library, reducing duplicate code by 30%.

Selected AI & Backend Projects

Switchboard — Independent AI change-management demo | [Live demo](#)

- Built a Python/FastAPI and LangGraph AI change-management system on AWS Lambda, with source-backed reports, policy evaluations, and independent human approval before execution.
- Orchestrated durable workflows with Step Functions and SQS; used DynamoDB transactions and idempotent receipts for safe retries and independently verified signed HTTP delivery.
- Defined infrastructure with CloudFormation and automated deployments through GitHub Actions using OIDC; added CloudWatch monitoring and distributed tracing.

Casamo — Independent product | [casamo.app](#)

- Built an AI stay-research product that turns Airbnb and Booking.com listings, reviews, and photos into cited shortlists, validating evidence and flagging unverified requirements.
- Built resumable AI investigations with Cloudflare Workflows, D1, and R2, preserving evidence across failures and restoring credits idempotently.

BA Eventos — Independent product | [baeventos.com](#)

- Built an AI event concierge with hybrid semantic and full-text retrieval, rank fusion, and reranking; applied PostgreSQL filters and assembled recommendation cards from retrieved catalog records.

Languages

- **English** — Native
- **Spanish** — Professional working proficiency

Education

- **B.S. in Health Sciences**, University of South Florida
